

Claims

1. A coating composition comprising the following (A) to (D) components:

- (A) component: a polycarbonate diol;
- (B) component: colloidal particles of a metal oxide;
- (C) component: a hydrolysate of an organosilane; and
- (D) component: a solvent.

2. The coating composition according to Claim 1, being characterized in that the (B) component comprises colloidal particles of oxides of one or two or more types of metals selected from the group consisting of tin, titanium, zirconium, antimony and silicon.

3. The coating composition according to Claim 1 or 2, being characterized in that an amount of the (A) component is in the range of from 0.1% by weight to 7% by weight.

4. A resin product having a light transmitting property, being characterized in that a resin substrate is applied with a cured film by the coating composition according to any one of Claims 1 to 3.

5. The resin product having the light transmitting property according to Claim 4, being characterized in that the resin substrate is a polycarbonate resin.
